

1. Identify the different ways objects can be initialized in JavaScript. (Select all that apply.)

1 point

- ☐ Objects can be created as literals using curly braces and creating key value pairs.
- ☐ New objects can not be created in JavaScript. You have to use the objects that already exist.
- ☐ The only way to create an object in JavaScript is with the object.make() method.
- ☐ Objects can be created using the new keyword like this: new Object();
- ☐ You can convert arrays into objects by using the convert() method.

2. Identify errors in the code below: (Select all that apply.)

1 point

```
var person = {  
  "firstname": "Jose";  
  "lastname": "Garcia";  
  "age": 25  
}
```

- ☐ The semicolons after "Jose" and "Garcia" should be commas.
- ☐ 25 should be in quotes.
- ☐ The curly braces should be parentheses instead.
- ☐ The keys, firstname, lastname and age should not be inside quotes.
- ☐ There should be a semicolon after 25.

3. Identify the keys in the object below:

1 point

```
var cat = {  
  name: "Fluffy",  
  speak: function(){ alert('meow'); },  
  rest: function(){ console.log('the cat is sleeping'); },  
  play: function(){ console.log('the cat plays with string'); }  
}
```

- ☐ There are no keys because of a syntax error.
- ☐ "Fluffy"
- ☐ name, speak, rest and play
- ☐ Name only because the speak, rest and play have functions as values.

4. Given the object below, what is the correct syntax for the cat, Fluffy, to let you know she is hungry?

1 point

```
var cat = {  
  name: "Fluffy",  
  speak: function(){ alert('meow'); },  
  rest: function(){ console.log('the cat is sleeping'); },  
  play: function(){ console.log('the cat plays with string'); }
```

}

- ☐ fluffy.play();
- ☐ fluffy.speak();
- ☐ cat.speak();
- ☐ cat.speak;

5. What is the name of the type of function shown in the code here:

1 point

```
function pet(species, name, sound, behavior) {  
  this.species = species;  
  this.name = name;  
  this.sound = sound;  
  this.behavior = behavior;  
  this.action = function () { return `the ${species} says ${sound} and is ${behavior} ` };  
}  
  
var myCat = new pet('cat', 'fluffy', 'meow', 'scratching the chair');
```

- ☐ An anonymous function
- ☐ This function has a syntax error
- ☐ Constructor function
- ☐ A function expression

6. Identify true statements about the provided code: (Select all that apply.)

1 point

```
function pet(species, name, sound, behavior) {  
  this.species = species;  
  this.name = name;  
  this.sound = sound;  
  this.behavior = behavior;  
  this.action = function () { return `the ${species} says ${sound} and is ${behavior} ` };  
}  
  
var myCat = new pet('cat', 'fluffy', 'meow', 'scratching the chair');
```

- ☐ The new keyword is optional when assigning this function to variables.
- ☐ Combined with the new keyword, this function can create objects based on the template this function provides.
- ☐ this is a keyword that refers to this object.
- ☐ this is a property of the window.
- ☐ myCat.name will produce "fluffy"

7. When tackling a more complex script, what are some strategies that can help you determine where to start. (Select all that apply.)

1 point

- ☐ Work linearly through the script.
- ☐ Try to do everything in one function.
- ☐ Start by seeing if you can solve the hardest problem first.
- ☐ Use diagrams to help you map out needed functions

- ☐ Use diagrams to help you map out needed functionality.
- ☐ Start with the core functionality and work outward from there.

8. Identify true statements about writing more complex scripts. (Select all that apply.)

1 point

- ☐ It is a creative process, be prepared for it to be messy initially.
- ☐ As the script progresses, you will find ways to refactor it and make it more efficient.
- ☐ Testing pieces of the script along the way will help you determine what the next steps should be.
- ☐ Most programmers get good at writing complex scripts and can do so with little or no planning in advance.
- ☐ Once you have figured out one complex script, all the other ones are easy.
- ☐ When making complex scripts, always declare all the variables you need first.
